PROFESSIONAL SUMMARY

Platform Engineer with 4+ years of infrastructure experience operating production AWS and Kubernetes systems. Hands-on across EKS capacity engineering, Linux and container-runtime debugging, networking and IAM troubleshooting, deployment automation, and observability. I turn production incidents and engineering bottlenecks into safer, repeatable platform capabilities.

SKILLS

Languages	Python, Bash, C
Kubernetes	Kubernetes (CKA), EKS, Helm, Karpenter NodePools, containerd, kubelet, CNI
AWS	EKS, EC2, ECR, EBS, S3, SQS, IAM/STS, IRSA, ALB
Networking	DNS/SRV, CoreDNS, VPC peering, NACLs, security groups, ALB/ELB, gRPC
CI/CD	Jenkins, JCasC, Job DSL, Buildx, Argo CD
IaC	Terraform, Pulumi
Security	Kubernetes RBAC, workload identity, image scanning, policy checks
Observability	Prometheus, VictoriaMetrics/vmalert, New Relic/NRQL, logs, alerting, Kubecost

EXPERIENCE

DevOps / Platform Engineer
Observe.AI

Sep 2024 – Present
Bengaluru, Karnataka, IN

- Investigated a production Realtime Service outage by correlating ELB 5xx responses with pod termination during Karpenter consolidation, identifying a node-lifecycle failure mode behind 1m38s of downtime.
- Engineered EKS node provisioning with Karpenter NodePools for Intel and Graviton workloads, using instance-family, CPU-capacity, and consolidation constraints to control placement and scaling.
- Reduced Bottlerocket EKS node and workload readiness time from approximately 10 minutes to 120 seconds (80%) through an EBS snapshot-based container-image preload workflow.
- Debugged MongoDB connectivity from Kubernetes over VPC peering by tracing DNS SRV/A resolution and private network paths from in-cluster diagnostic pods; tightened NACL and security-group controls for database and ephemeral-port traffic.
- Resolved KEDA AWS authentication failures by tracing STS `AssumeRole` denials to IAM permissions required for SQS queue-attribute retrieval.
- Migrated Kubernetes workloads toward AWS Graviton by validating ARM64-compatible base images and building multi-architecture Docker images, delivering 20–25% infrastructure cost savings.
- Built EKS-based Jenkins CI infrastructure with Helm, JCasC, and Kubernetes agents; integrated Buildx and ECR for multi-architecture builds and cross-account image access.
- Automated Terraform change delivery through a Jira-state-driven Jenkins workflow that publishes plans and Gemini reviews, enforcing approval gates before infrastructure changes are applied.

DevOps Engineer
Amagi Media Labs

Aug 2023 – Sep 2024
Bengaluru, Karnataka, IN

- Strengthened GitOps delivery with Argo CD, image scanning, and policy checks before promotion across environments.
- Executed staged Kubernetes upgrades and add-on rollouts with health validation and documented rollback procedures to reduce deployment risk.
- Rolled out AWS Load Balancer Controller and ingress, improving predictable routing to internal services.
- Built Slack-backed tooling for guarded, on-demand deployments with a lightweight audit trail (who, when, what).

- Partnered with SRE on dashboards and alerts for pull requests, releases, cloud spend, and on-call operations.
- Delivered infrastructure changes through the platform team's standardized Pulumi stacks.

Teaching Assistant

Indian Institute of Science

Aug 2022 – Apr 2023

Bengaluru

- E0 225 (*Design & Analysis of Algorithms*): tutorials and evaluation; cohort of 80+ students.
- E0 208 (*Computational Geometry*): evaluation and invigilation; cohort of 60+ students.

Big Data Engineer

Exadatum

July 2019 – Apr 2020

Pune, Maharashtra, IN

- Built a Docker-based Spark + Livy setup for notebook-driven jobs so the team could iterate before paying for Dataproc clusters.
- Consolidated related Java modules and added JUnit coverage around Kafka → GCS ingestion paths.
- Delivered POCs across Dataproc/Livy REST, GKE deploy scripts (logs to GCS), and multi-user JupyterHub (details on request).

SELECTED PUBLIC WORK

- **jenkins-k8s-agent-helm** — Jenkins inbound agents on Kubernetes (WebSocket, IRSA, optional Karpenter). github.com/SkaleKontrol/jenkins-k8s-agent-helm
- **ECR + Bottlerocket EBS snapshot** — encrypted volume snapshot with image pre-pull for faster EKS node bring-up. github.com/SkaleKontrol/ecr-bottlerocket-ebs-snapshot
- **klabctl** — kubeadm-based multi-node Kubernetes lab on Multipass. github.com/SkaleKontrol/klabctl

CERTIFICATIONS & ACHIEVEMENTS

- **GATE 2021**: Top 2% among ~200k candidates (GATE CS paper); admitted to IISc Bangalore (M.Tech CSA).
- [Google IT Automation with Python – Coursera Professional Certificate](#)
- [Certified Kubernetes Administrator \(CKA\)](#)
- Jenkins CI/CD Bootcamp – Udemy (Jun 2025)
- Liquibase and the CI/CD Process – Liquibase (Oct 2024)

EDUCATION

Master of Technology – Computer Science and Automation, IISc Bangalore

July 2023

- Relevant coursework: Network and Distributed Systems Security, Principles of Distributed Software, Scalable Systems for Data Science.
- Coursework and readings on distributed systems, fault tolerance, storage, and messaging at scale.
- Teaching Assistant, *Computational Geometry*: graded work and supported 100+ students (UG, M.Tech, Ph.D.) with timely feedback on assignments.

Bachelor of Engineering - Computer Science, MGM's COE Nanded

July 2019

- Relevant coursework: Data Structures and Algorithms, Operating Systems, Computer Networks, Database Management Systems.
- C and Python used across coursework, labs, and small projects.
